

Factors Affecting the Distribution of Migratory Waterfowls at the Annawilundawa Ramsar Site of Northwestern Sri Lanka

Report on the Factors Affecting the Distribution of Migratory Waterfowl at the Annawilundawa Ramsar Site no 1078

October 2009 to September 2010

Submitted to the University of Sri Jayewardenepura, Gangodawila, Nugegoda, Sri Lanka by Dr. W.A.D. Mahaulpatha as required by the scientific Grant ASP/06/RE/2009/17

Contents

Acknowledgement	iii
1.0 Introduction	
1.1 Background of the study	1
1.2 Study site	2
1.3 About waterfowls	4
2.0 Methodology	
2.1 Population estimation	5
2.2 Behavioral observations	6
2.3 Habitat data	6
2.4 Water level and Water quality	7
2.5 Food availability	7
2.6 Disturbances	7
3.0 Data Analysis	8
4.0 Results	
4.1 Water bird and waterfowl population in study site	9
4.2 Monthly variation of waterfowls	10
4.3 Diurnal activity budget of waterfowls	11
4.4 Habitat details and habitat utilization of waterfowls	11
4.5 Relationship between Waterfowl population with water level Fluctuation and water quality	12
4.6 Food availability	13

4.7 Disturbances to waterfowls	13
5.0 Discussion	14
6.0 Management implications	17
7.0 References	18
