AN ECONOMETRIC MODEL
FOR SRI LANKA
(1970 - 1979)

BY
E. ARIYADASA

'ABSTRACT'

This project initially deals with a Basic Model comprising structural equations for most crucial macro-economic variables on the basis of the data available for the Sample Period (1970 - 1979). Then an attempt is made to derive at a more Detailed Model by treating the estimated Basic Model as a prototype. Finally the comparative performance of the Basic Model in relation to other Models already available and the inferences made on the economy on the basis of the Basic Model are dealt with.

CONTENTS

CHAP.		PAGE
1	INTRODUCTION	
	1.1 Methodology	3
	1.2 Data	4
	1.3 Outline	4
2	COMPILATION OF DATA FOR THE SIMPLE MODEL	5
	2.1 Endogenous Variables	6
	2.2 Pre-determined Variables	8
3	STATISTICAL FORM OF THE MODEL	10
	3.1 Production Function	12
	3.2 Consumption Function	14
	3.3 Investment Function	16
	3.4 Import Function	18
	3.5 Price Level Function	23
4	THE DETAILED MODEL	24
	4.1 Compilation of Data	27
	4.2 Production Functions	33
	4.3 Consumption Function	37
	4.4 Investment Function	39
	4.5 Import Function	42
	4.6 Export Function	44
	4.7 Price Level Function	47
	4.8 Money Supply Function	47
5	PERFORMANCE OF THE SIMPLE MODEL	48
	5.1 Comparison of Standard Test Statistics	49
	5.2 Behaviour of the Model within the Sample Period	52
6	SUMMARY & CONCLUSIONS	57
	6.1 Gross Domestic Production	57
	6.2 Consumption	57
	6.3 Investments	58
	6.4 Imports	58
	6.5 Price Level	59
	BIBLIOGRAPHY	60
	APPENDIX I - Reduced Form of the Model	61
	APPENDIX II - Other Models for Sri Lankan Economy	65
	APPENDIX III - Data for the Models	72
