Abstract

Wasgamuwa National Park (WNP) is one of the important habitats in the Mahaweli project area for the long-term conservation of huge swamp elephant (*Elephas maximus ceylonensis*). An economic study was carried out in the WNP to estimate the its local recreational value. The economic approach used to estimate the recreational value was the travel cost method. This approach values environmental services using surrogate market prices which includes all the expenses incurred by the user in viewing wildlife. Travel cost approach is based on the simple proposition that observed behavior can be used to derive a demand curve and to estimate a value (including consumer surplus) for an un-priced environmental goods and services by treating increasing travel costs as a surrogate for variable admission fees. In addition the present study also aimed at estimating an appropriate user fee which gives the maximum revenue. Questionnaire survey was conducted to collect primary data. Visitors were selected randomly and were interviewed at the park. In the estimation, average zonal travel costs were regressed against the respective zonal visitation rates to derive the per capita demand functions for wildlife viewing. The consumer surplus of wildlife viewing was calculated by deriving respective zonal capita demand functions. The local consumer surplus at present park entrance fee is 1.85 million Rupees per year, and the consumer surplus per visit is Rs.78.82. The total local recreational value is 2.38 million Rupees for the Wasgamuwa National Park in 2001 and then the site is worth about Rs. 83.09 per visit. Such a low amount indicates the degree of under valuation of this natural resource. The park entrance fee could be increased considerably and to get the maximum revenue the per capita entrance fee should be Rs. 109.00. This may reduce the present visitor number by about 47%, but it will improve the total revenue by 188.91%. The decided fee should be affordable to a majority of the general public.

LIST OF FIGURES	II
ACKNOWLEDGEMENTS	III
ABSTRACT	IV
CHAPTER 01: INTRODUCTION	01
01.1: National Reserves in Sri Lanka	01
01.2: Economic Value	02
01.3: Biodiversity & Economic Value	04
01.4: Theoretical Concept	06
01.5: Objectives of the study	08
CHAPTER 02: LITERATURE SURVEY ON ENVIRONMENTAL VALUATION	11
CHAPTER 03: STUDY AREA	15
03.1: Location	15
03.2: Physical characteristics of WNP	16
03.3: Fauna and Flora of WNP	18
03.3.1 Flora	18
03.3.2 Fauna	18
03.4: Historical significance	19
03.5: Visitors and visitor facilities	20
03.6: Access to WNP	22
CHAPTER 04: METHODOLOGY	23
04.1: Travel Cost Method (TCM)	23
04.2: Data Collection & Questionnaire Survey	24
04.2.1: Total Travel Cost (TTC) Estimation	27
04.2.2: Obtaining the statistical regression	28
04.2.3: Construction of the demand curve	28
04.2.4: Determination of price which gives the maximum revenue	29

CHAPTER 05: RESULTS	32
05.1: Estimation of Visitation Rates and Travel Costs	32
05.2: Estimation of Optimum Park Entry Fee for Wasgamuwa National Park	34
05.3: Estimation of Total Consumer Surplus	40
CHAPTER 06: DISCUSSION	43
06.2: Methodological issues with TCM	47
06.3: Visitor Perceptions	52
CHAPTER 5: CONCLUSIONS & RECOMMENDATIONS	54
