

An Optimal Production Process to Maximize  
Profit Based on Data from a Factory  
Producing Orthodox Tea

By

Meemanage Buddhipani Yashodha Perera

Thesis submitted to the University of Sri Jayewardenepura for the award of  
the Degree of Master of Science in Industrial Mathematics in 2008

The work described in this thesis was carried out by me under the supervision of Prof. Sunethra Weerakoon and Mr. D. D. Ananda Gamini and a report on this has not been submitted in whole or in part to any university or any other institution for another Degree/Diploma.

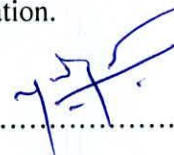

M. B. Y. Perera

## Table of Contents

Table of Contents	i
List of Tables	vi
List of Figures	viii
List of Formulas	ix
Acknowledgement	x
Abstract	xi
<b>Chapter 1 Introduction</b>	<b>01</b>
1.1 Tea	01
1.2 Tea Plant	01
1.3 History of Tea	02
1.4 Ceylon Tea	02
1.5 Tea Industry in Sri Lanka	03
1.5.1 Tea Production	03
1.6 Colombo Tea Auctions	04
1.7 Tea Exports	04
1.8 Quality of Tea	04
1.9 Tea Grades	05
<b>Chapter 2 Project Background</b>	<b>06</b>
2.1 Raigamkorale Tea Shakthi Tea Factory	06
2.1.1 Facelift for Raigamkorale Tea Factory	06
2.2 The Factory Process	08
2.2.1 Withering	08

2.2.2	Rolling	09
2.2.3	The Rolling Program	10
2.2.4	Fermentation	12
2.2.5	Drying	12
2.2.6	Sifting	13
2.2.7	First and Second Dhools	13
2.2.8	Third Dhool	14
2.2.9	Big Bulk	16
2.2.10	Packing	17
2.3	Objectives	17
2.3.1	Overall Objective	17
2.3.2	Specific Objectives	18
<b>Chapter 3</b>	<b>Literature Review</b>	<b>19</b>
3.1	Thin Layer Modelling of Black Tea Drying Process	19
3.2	Effect of Enzyme Inactivation by Microwave and Oven Heating on Preservation Quality of Tea	20
3.3	An Investigation on the Production of Construction Brick with Processed Waste Tea	21
3.4	Automatic Endpoint Determination for Batch Tea Dryers	21
3.5	The Impact of Processing Techniques on Tea Volatiles	22
3.6	Tea is a Better Drink than Water	23
3.7	Benefits of Tea in Reducing Diseases	23

<b>Chapter 4</b>	<b>Data Collection</b>	<b>25</b>
4.1	Collection of Factory Data	25
4.2	Data Gathered from the Factory Officer and Labourers	25
4.3	Collection of Data from Monthly Accounts	26
4.4	Collection of Auction Data	27
4.5	Collection of Data from Sri Lanka Tea Board	27
4.6	Data Collected from Other Tea Factories	28
<b>Chapter 5</b>	<b>Analysis of Data</b>	<b>29</b>
5.1	Analysis of Production Data of All Tea Grades	29
5.2	Analysis of Production Data of Best Tea Grades	31
5.3	Analysis of Production Data of All Tea Grades Separately	32
5.3.1	BOP1	32
5.3.2	FBOP1	33
<b>Chapter 6</b>	<b>Methodology</b>	<b>34</b>
6.1	Selection of the Method	34
6.2	Introduction of Constraints	34
6.2.1	Total Production	35
6.2.2	First and Second Dhools	37
6.2.3	Third Dhool	40
6.2.4	Big Bulk	43
6.2.5	FBOPF SP and FBOPF EX SP	44
6.2.6	Pekoe and Pekoe1	44
6.2.7	FBOP and FBOP1	45

6.2.8	The Upper Bound and Lower Bound Values	45
6.3	The Model	46
6.3.1	Assumptions	48
<b>Chapter 7</b>	<b>Results and Discussion</b>	<b>49</b>
7.1	Testing the Model Using Given Lower Bound and Upper Bound Values	50
7.2	Testing the Model with Different Lower Bound Values	52
7.3	Making Lower Boundary Zero for All the Off Grades	54
7.4	Making Lower Boundary Zero for the Grades Having Lower Prices	56
7.5	Making Lower Boundary Zero for All the Tea Grades	59
7.6	Testing the Model for the Data of January, 2008	63
7.7	Testing the Model for the Data of February, 2008	65
7.8	Testing the Model by Reducing the Big Bulk and Increasing the Third Dhool	67
7.9	Testing the Model Using LINDO Optimization Software	72
<b>Chapter 8</b>	<b>Conclusion</b>	<b>69</b>
<b>Chapter 9</b>	<b>Recommendations</b>	<b>75</b>
<b>References</b>		<b>76</b>

## Acknowledgement

I express my sincere gratitude to my supervisor Prof. Sunethra Weerakoon, Coordinator of the Industrial Mathematics program, Department of Mathematics, Faculty of Applied Science, for giving her guidance and assistance towards a successful completion of this research. Further I express my sincere appreciation to my supervisor Mr. D. D. Ananda Gamini, Senior Lecturer, Department of Statistics and Computer Science, Faculty of Applied Science, for his guidance and assistance throughout my research. I also would like to thank both of my supervisors for spending their valuable time in visiting the factory and going through the entire process without complains for having to sacrifice their weekend.

I express my gratitude to Mr. Kudabanda, General Manager, Tea Shakthi Fund, who offered me the industrial placement with all the facilities. I specially thank Mr. S. P. Edirisinghe, Manager, Mr. M. A. F. N. Fernando, Factory Officer, and Mr. C. Geoffrey, Chief Clerk, and all other staff members of Tea Shakthi Tea Factory, Horana for giving me necessary information to complete my research successfully.

I also thank factory officers of Sunils tea factory, Ingiriya, New Diyagala tea factory, Deniyaya, D and T tea factory, Rathnapura, Bandarahena tea factory, Kalawana, and New Batuwangala tea factory, Deniyaya, for giving their information about the production.

Further I thank Mr. Ravi de Silva, Manufacturing Advisor, Lanka Commodity Brokers for giving the auction data for each tea grade.

## **Abstract**

The profit of the Tea Shakthi tea factory was calculated by using different production values for all tea grades produced in orthodox tea manufacturing processes. The results indicated that the production of more grades with different production values than the current factory process will increase the profit of the factory by 80%.

A linear programming model was constructed to maximize the profit of the factory by assuming that the total production of the factory was exactly 21.5%. However it varies slightly with the monthly production and the quality of green leaf. For convenience, the cost of producing one kilogram of tea is taken to be a constant by averaging all costs reported. The results obtained will depend on both of these factors but they will not greatly affect the solution because the values taken are reliable and very close to the actual values of the relevant month.

To increase the profit, it is required to change the actual manufacturing process at certain stages and it was revealed that the suggested changes are viable under the existing conditions according to the available sources.

# Chapter 1

## **Introduction**

This chapter mainly deals with the history and general knowledge of tea production and the usage of the end product and hence mostly contains quotations.

### **1.1 Tea**

Tea is the most popular non-intoxicating beverage in the world. The three main categories of tea are black, green, and oolong. Within each of these categories there are many varieties. Tea bags were introduced in the twentieth century, and it is the most popular form people like to use.

### **1.2 Tea Plant**

The tea plant is an evergreen of the *Camellia* family that is native to China, Tibet and northern India. There are two main varieties of the tea plant. The small leaf variety, known as *Camellia sinensis*, thrives in the cool, high mountain regions of central China and Japan. The broad leaf variety, known as *Camellia assamica*, grows best in the moist, tropical climates found in Northeast India and China. The plant produces dark green, shiny leaves and small, white blossoms.[3]

### **1.3 History of Tea**

Tea was first discovered by the Chinese emperor Shennong in 2737 BC. When the emperor on a trip to a distant region, he and his army stopped to rest and a servant began to boil water for him to drink. A dead leaf from a wild tea bush fell into the water and it turned a brownish colour and presented to the emperor. The emperor drank it and found it very refreshing, and tea was born. During the period of Chinese emperor Tang Dynasty, tea became a popular drink in China. The legends tell that tea spread along with Buddhism. [3]

### **1.4 Ceylon Tea**

Prior to 1960s, main foreign exchange earner in Sri Lanka was coffee and today tea has taken this position and Sri Lanka is the world's third biggest exporter of tea. The two men responsible for this transformation are James Taylor and Sir Thomas Lipton.

In 1866 the first seeds were planted at Loolecondera by James Taylor the person who introduced tea cultivation to Sri Lanka. The first shipment of Ceylon tea had reached the London auctions in 1875. In 1890, Sir Thomas Lipton bought tea estates from Sri Lanka and sent tea to Britain and at present also his company produces best quality tea. [4]

Ceylon tea from Sri Lanka, acclaims as the best tea in the world has its inherent unique characteristics and reputation running through more than a century. The influence of climate conditions of its plantation imparts to the product a variety of flavors and aromas, synonymous with quality.
