

DEVELOPMENT OF CINNAMON
FLAVOURED INSTANT PORRIDGE
POWDER USING AMYLASE TREATED
KITHUL FLOUR (*Caryota urens*)

BY

Kuhanneya Kugamohan

Thesis submitted to the University of Sri Jayewardanapura for the
award of Degree of Master of Science in Food Science and
Technology in 2015

DECLARATION

The work described in this thesis was carried out by me under the supervision of Dr.R.A.U.J.Marapana, Senior Lecturer, Department of Food Science and Technology, Faculty of Applied Sciences, University of Sri Jayewardenepura and Dr. P. Ranasinghe, Senior Deputy Director, Herbal Technology Section, Industrial Technology Institute and a report on this has not been submitted in whole or in part to any University or any other Institution for another Degree or Diploma.

8/12/2015

Date

K. Kugamohan

Kuhanneya Kugamohan

We certify that the above statement made by the candidate is true and that this thesis is suitable for submission to the University for the purpose of evaluation.

 8/12/2015

Dr. R.A.U.J. Marapana
Senior Lecturer,
Department of Food Science and
Technology,
Faculty of Applied Sciences,
University of Sri Jayewardenepura,
Gangodawila,
Nugegoda,
Sri Lanka.

Dr. P. Ranasinghe,
Senior Deputy Director,
Herbal Technology Section,
Industrial Technology Institute,
Buddhaloka Mawatha,
Colombo – 7,
Sri Lanka.

DEDICATION

Affectionately dedicated to

my Parents and

my loving Husband

ABSTRACT	x
Chapter 1:	
INTRODUCTION	1
Objectives	3
General objective.....	3
Specific objectives.....	3
Chapter 2:	
LITERATURE REVIEW.....	4
2.1 The Palm.....	4
2.2 Kithul (Caryota urens) flour Extraction	5
2.3 Identification and Chemical Parameters.....	5
2.3 The Gelatinization	9

2.4 Gelatinization temperature.	10
2.5 Gelation Studies	11
2.6 Factors affecting starch analysis.....	12
2.6.1 The use of enzyme in starch hydrolysis.....	14
2.6.2 Starch	15
2.6.3 Application of Starch	19
2.6.4 Percentage of water soluble materials present in starch	20
2.7 Alpha Amylase	20
2.8 Cinnamon (<i>Cinnamomum zeylanicum</i>)	21
2.8.1 Cinnamon as an antidiabetic agent	22
2.9 Identification of reducing sugar in Kithul Flour	22
2.9.1 Maltose.....	23
2.9.2 The importance of DNS assay in determining reducing sugar content	24
2.9.3 Determination of Maltose by DNS method (Miller,1959).	25
2.9.4 Spectrophotometry.....	26
2.10 Antioxidant Property	27
2.10.1 Total Polyphenolic Content (TPC) Assay Principle	28
2.10.2 Oxygen Radical Absorbance Capacity (ORAC) of Selected Foods.....	29

2.10.3	Ferric Reducing Antioxidant Power (FRAP) Assay	30
Chapter 3:		
	MATERIAL AND METHODS	31
	Location.....	31
3.1	Formulation and development of Instant Kithul porridge powder.....	31
3.1.1	Establishing an analytical technique to quantify the production of Maltose due to hydrolysis by the Kithul (<i>Caryota urens</i>) flour sample.....	31
3.2	Gelation Studies	34
3.3	Cinnamon water extraction method.....	35
3.3.1	Quantification of cinnamon extract	35
3.4	Sensory Evaluation 1 & 2.....	36
3.4.1	Preparation of kithul porridge powder.....	36
3.5	Quantification of maltose present in the digested Kithul starch slurry by DNS method.....	38
3.6	Determination of total polyphenolic Content (TPC) and Antioxidant content in the original commercially available kithul flour and final developed cinnamon flavoured kithul porridge powder.	39
3.6.1	Determination of total polyphenolic content (Singleton et al., 1999)	39
3.6.2	Determining the total antioxidant content by Oxygen Radical Absorbance Capacity Assay (ORAC) (Ou et al., 2001).	40

3.6.3 Determining the Total Antioxidant content by Ferric Reducing Antioxidant Power (FRAP) Assay (Benzie and Szeto, 1999)	41
3.7 Proximate analysis of the Commercial flour and final product.....	43
3.7.1 Determination of the moisture content	43
3.7.2 Determination of crude fat content	45
3.7.3 Determination of the protein content	46
3.7.4 Determination of the Ash content (AOAC 923.03).....	49
3.7.5 Determination of crude fiber content (AOAC 920.86).....	50
3.7.6 Determination of Total carbohydrate.....	52
3.8 Determination of Maltose by HPLC method	52
Chapter 4:	
RESULTS AND DISCUSSION	53
4.1 Determination of Maltose content in the product by plotting curves.....	53
4.1.1 Developing Standard Maltose curve.....	53
4.1.2 Determining Texture and the Maltose content in the product	53
4.2 Gelation study of the digested four samples	54
4.3 Cinnamon water Extraction and quantification of dry matter	55
4.4 Sensory Analysis of Instant Kithul Porridge powder	55

4.4.1 Results of best maltose concentration and gelatinization property for the product. (sensory 1)	55
4.4.2 Results of Sensory Evaluation 2	60
4.5 Quantification of Maltose content in the sample selected from the sensory evaluation.	63
4.6 Results of Total Polyphenolic Content and Total Antioxidant content of commercially available flour and developed product	64
4.7 Results of Proximate Analysis of the final product.....	65
4.8 Results of Maltose content.	67
4.8.1 HPLC results for Standard (Maltose)	67
Chapter 5:	
CONCLUSIONS.....	70

ACKNOWLEDGEMENT

First and foremost I wish to express my sincere gratitude to my internal supervisor Dr. R.A.U.J. Marapana, Department of Food science and Technology, University of Sri Jayewardenepura for his valuable guidance, support and precious advice.

Then I wish to express my sincere thanks to my external supervisor Dr. P. Ranasinghe, Senior Deputy Director, Industrial Technology Institute (ITI) for his valuable advice, continuous encouragement and supervision and also would like to thank for giving me the opportunity to carry out my research at ITI.

It is a pleasure to convey my sincere thanks to all the staff members of ITI for their kind support.

My special thanks to the academic and non-academic staff members of the Department of Food Science and Technology, University of Sri Jayewardenepura for their valuable contribution and advice.

Finally my heartfelt thanks to my loving parents, my husband and my dear friend for their invaluable contribution and moral support throughout my research.

ABBREVIATIONS

PB	Phosphate Buffer
TPC	Total Polyphenolic Content
FRAP	Ferric Reducing Antioxidant Power
ORAC	Oxygen Radical Absorbance Capacity
DNS	Dinitro salysilic acid
HPLC	High performance liquid chromatography
CP	Cinnamon Polyphenols.
UV	Ultra Violet.
AC	Antioxidant Capacity.
IR	Infrared
DSC	Differential Scanning Calorimetry.
GCWS	granular cold water soluble starch.

**DEVELOPMENT OF CINNAMON FLAVOURED INSTANT
PORRIDGE POWDER USING AMYLASE TREATED KITHUL
FLOUR (*Caryota urens*)**

Kuhanneya Kugamohan

ABSTRACT

Traditionally, Kithul flour which is extracted from *Caryota urens* L. palm has been used in variety of health foods including Kithul gel and thick porridge. However, as yet there is no significant improvement in these traditional products in order to suit modern consumer preferences. Therefore, this study was focused to develop a ready to serve porridge powder with low gelatinization and improved bioactive properties using enzyme hydrolyzed Kithul flour.

Kithul flour purchased from market was used for this study and different concentrations of heat resistant alpha amylase were used for hydrolysis of kithul flour. After digestion, maltose content was evaluated using ditro-salicylic acid method. Then samples were tested for gelatinization. Hydrolyzed samples with low gelatinization were selected for the development of less viscous porridge. The porridge samples were prepared after number of primary experiments with different flour:amylase:cinnamon extract ratios as 100g:0.1g:0.1ml, 150g:0.1g:1ml and 100g:10g:0.5ml. Sensory evaluation was conducted for 30 untrained panelists. The results were analyzed using computer aided MINITAB 17.2.1 statistical analysis package according to Kruskal Wallis test at 95% level of significance. The best sample with 100g:10g:0.5ml flour: amylase: cinnamon extract ratio was selected from the analysis. Total Polyphenolic content and Total

Antioxidant content assay was carried out for the commercial flour and the developed product.

Total Antioxidant content of the developed product was not significantly different from the commercial kithul flour. Proximate analysis was carried out for the commercial kithul flour and the developed product where the Ash content, crude fiber content, protein content of commercial flour and cinnamon flavoured instant Kithul porridge powder was (0.3%, 0.3%), (0.7%, 0.6%), (0.8%,0.9%) respectively. The Moisture content of the commercial flour was 14.2% and for the product was 6.4%, and the Fat content of the commercial flour was 0.12% and for the product was 0.2% and the carbohydrate content of the commercial kithul flour was 84.7% and for the product was 92.2%.

The developed porridge is a potential alternative for traditional product with attractive properties including less thickness, sweetness without added sugar, easy to prepare and enhanced bioactive properties due to incorporation of herbal extract like cinnamon.
