**ROLE OF FAMILY IN HUMAN CAPITAL
FORMATION:
IMPLICATIONS FOR POVERTY REDUCTION
IN SRI LANKA**

By

D.P.S. Chandrakumara

Thesis submitted to the Faculty of Graduate Studies, University of Sri
Jayewardenepura for the award of the Degree of Doctor of Philosophy in

Economics

On 11th December, 2008

Dedication

This study is dedicated to the loving memory of my precious father
and
to my mother Mrs. A. Hewavitharana who made an immeasurable contribution throughout my
education career

Declaration

The work described in this thesis was carried out by me under the local supervision of Professor Upali Wickramasinghe, in the Department of Economics University of Sri Jayewardenepura, and foreign supervision of Dr. Susanne Stenbacka, Department of Social and Economic Geography, University of Uppsala, Sweden, and a report on this has not been submitted in whole or in part to any university or any other institution for another Degree/Diploma.

.....
D.P.S. Chandrakumara

Department of Economics

University of Sri Jayewardenepura

Nugegoda

Sri Lanka.

5th December 2008

Certification

I certify that the above statement made by the candidate is true and that this thesis is suitable for submission to the University for the purpose of evaluation.

Professor Upali Wickramasinghe
Department of Economics
University of Sri Jayewardenepura

Acknowledgements

This study has been an incredible journey and a monumental milestone in my academic life. It has been an interesting, stimulating, challenging and occasionally frustrating work. I could not have embarked on this expedition and traveled this far without the passionate and continued support of the following individuals and institutions.

First of all, I would like to express my heartfelt gratitude to Senior Professor M. M. Karunanayake who was the Project Leader, sida/SAREC Research Cooperation Project, for providing me the opportunity to undertake this study under the Project as a PhD candidate and Dr. C.K.M. Deheragoda who became Project Leader after Professor Karunanayake. I am equally thankful to Dr. Clas Lindberg, Coordinator of the sida/SAREC Research Cooperation Project, for providing me all the facilities during my stay in Uppsala and Gothenburg Universities in Sweden. I appreciate the contribution of the sida/SAREC Research Cooperation Project and the Government of Sweden for the provision of financial assistance and training.

I wish to express my deep gratitude to Senior Professor M. M. Karunanayake, Professor P. Wilson, University of Sri Jayewardenepura and late Professor Anders Narman for transforming my interests into something concrete and fundamentally important in the field of human capital and guiding me wisely through the rapids of this exciting intellectual exploration as my supervisors at the initial stage of the study.

I would like to express my deepest gratitude to Prof. U.A.E. Wickramasinghe and Dr. Susanne Stenbacka, my supervisors, who anchored me over the last four years as I navigated this leg of my academic life. Their suggestions have enabled constant improvement and refinement of the thesis and their encouragement has helped me brave the rough times when things do not seem to go in the right direction. I truly appreciate their thoughtfulness, dedication and enthusiasm that they showed me.

I also take the opportunity to thank Dr. N.L.A. Karunaratne, Vice Chancellor and former Chairman of the Board of Social Sciences, Prof. P. Athukorala, Dean of the Faculty of Arts, Professor B.A. Tenison Perera, former Chairman of the Board of Social Sciences for their always charming and helpful hand.

I devote my gratitude to my fellow colleagues Dr. R.M.K. Ratnayeka, Mr. Hemantha Diunugala, Mr. L. Lasantha, Mr. P. Dias, Rev. Sangasumana, Dr. S. Thennakoon, Mr. A. Kalyanaratne and all members of the Department of Economics, University of Sri Jayewardenepura, for their endless contributions.

I would particularly like to thank Professor Kumudu Wijewardene, Dean and the staff of the Faculty of Graduate Studies for providing a stimulating environment on graduate studies.

I gratefully acknowledge Professor Leneart and Professor Gunnar Olson for their valuable advice and constructive comments.

During the field work in Anuradhapura District of Sri Lanka, many institutions and people have supported me. I extend my sincere thanks to all of them. I am much indebted to the Planning and Implementation Department of Anuradhapura Secretariat Office, and the Divisional Secretariat Office of Galnewa for providing me with all kinds of support required during the field work. Also, special gratitude goes to the four investigators R. M. Kapila, P.B. Badara, K.M. Jayesampath and L.P. Kalansooriya for their timely collection of data, which was the main input in my research work. I would also like to express my gratitude to all Grama Nildari and Samurdhi Niladari personnel for their endless support and cooperation through the data collection process.

I would deeply like to express my respect and appreciation to my mother, mother-in-law, brother, three sisters and all their family members for their inspiration, encouragement and support during the execution of this work.

And last but not least, my heartfelt love and affection goes to my beloved wife Malani and my son Thathsara for their inspiration, support and understanding of their responsibility during this work. I am deeply indebted to them for the time I did not spend with them.

ABSTRACT

This study examined the role of family in human capital formation through education. The study adopted both quantitative and qualitative methods complementarily in reaching the aim. The data for the quantitative analysis came from a questionnaire survey while the data for the qualitative analysis was obtained through discussions with children, their family members and village elites in three different areas of the Anuradhapura District of the North Central Province of Sri Lanka. Descriptive statistics helped identify the binary logistic regression model with a probability of a child reaching Advanced Level as the dependent variable and six explanatory variables as appropriate for the estimation purpose.

It was found that the two variables, 'Number of Senior Siblings' and 'Assets Index' are positively correlated with the probability of a child reaching Advanced Level while the two variables, 'Father's Age' and 'Number of Junior Siblings' show a negative relationship. The qualitative analysis revealed how the role of family is important in the formation of human capital among children. It revealed that family assets being a proxy for long-term family income reduces time for work and increases the time for education of children. However, despite the assets level, rural children especially girls are at a disadvantage in education. Among the occupation categories, teaching and executive occupations are the best in the formation of human capital while the worst is farming and low-level physical labour occupations. Senior siblings endow both pecuniary and non-pecuniary benefits for junior siblings while junior siblings generate negative effects on elder siblings' education. Father's age is inversely related with the education of children because older fathers are not rich enough with modern attitudes, education and social contacts which are important for education compared to young fathers. The other members living with the nuclear family positively affect the education of children as they fulfil much of the duties which otherwise

should be completed by children although the number of families that have such members are negligible. The study further reveals that though gender of child is not a factor for the education decisions of parents, girls face disadvantages in education due to femininity.

The study presents its special implications for poverty alleviation. When the children are not matured enough to take education decisions by themselves, the role of family is more important. Since this role is significantly determined by the economic position of families, there should be an alternative mechanism for poor families to mobilize human capital among them. Steps should also be taken to minimize the rural and urban disparity in human capital formation. Positive externalities generated by senior siblings on junior siblings should be expanded by economically empowering the elder children in poor families. Government education policy should be linked with the housing and employment policies. As parents' presence at home is important for the children's education, the government should take action not to employ or transfer parents far away from family. Higher drop outs of elder children and the time of children devoted to work should be paid more attention by the government. Alternative strategies should be adopted when the family variables are not possible to be activated in the short-run. Since private tuition improves the accessibility to effective human resources for all children, steps should be taken to extend the service of the private sector more systematically.

Among the links identified for further research, the impact of age gaps among siblings, gender structure, role of non-family factors and informal education in the formation of human capital are important. In addition, children's specialization in different fields of study, possibility to regulate the private sector for a better process of human capital formation, and children's time allocation among education, work, and leisure are to be further studied.
