

## **EXECUTIVE SUMMARY**

The Election Commission of Sri Lanka is currently responsible for conducting the Annual Enumeration of Electors and conducting of five types of elections in Sri Lanka.

The author has observed that the Election Commission has faced severe issue in assets management due to lack of information about assets of the Election Commission due to the lack of proper documentations/records for assets, the difficulty in searching and locating of items, the lack of information on inventory levels, the lack of communication among district offices and head office, the inefficiency of the manual system, and the heavy work load bared by the staff specially during the elections period.

By considering the issue with deep understanding, automated system has been designed and developed for the Election Commission with functionalities for covering the areas required in an Assets Management System. Once the system is introduced in the Election Commission it can be seen that the Effective assets management of Election Commission of Sri Lanka, improved transparency in the Election Commission of Sri Lanka in terms of assets management which will be resulted in good governance of the country, developed capacity of staff of Election Commission of Sri Lanka
